

70412 OXYCORYNIA FASCICULARIS

type
T122S

dimensions
58-19-145

lovingly handcrafted
limited edition 100 pcs

material

front and temple tips genuine
cellulose acetate, 8mm.
hinge components pure titanium.
surface radial scratch blasted.

UV400 australian standard
anti-reflection coated PA-lenses.

the lollypop tunicate is sometimes mistaken for a coral, hence it is often named cauliflower coral, but essentially it is a sea squirt. and although it belongs to the same phylum which also includes vertebrates (animals with a backbone) it is actually not just a single entity, an individual, it is a group of zooids forming a sessile colony. the colony heads sit on top of fingerlike stalks which all share a conjoint base. tunicates are filter feeders and need nutrient-rich water thriving with plancton.
