

All of our mp-specs and mp-slimes are made of titanium in comparison to most sheet metal glasses on the market that are made of stainless steel. Special surface treatment, such as PVD coating and lovingly handcrafted gradients from sandblasted to polished complement the lavish finish of our spectacles.

In contrast to the majority of customary metal and sheet metal glasses we utilize a specially engineered nose bridge instead of nose pads. The exchangeable bridges come in five diverse sizes and are fully adjustable. The built-in core wire ensures absolute contour accuracy. No more bruises, only complete comfort. And virtually invisible.

The crystal-like colors of the screw-less spring hinges contrast with hand-polished and blasted titanium surfaces. This unique look through effect creates a very special three-dimensional appearance and lends our spectacles a visual airiness that goes with the light weight design of titanium and nylon (PA).
